

News for CONSULTANTS & ENGINEERS concerning

DUCTILE IRON PILES

In average more than **800.000** linear meters of Ductile Iron Piles are driven in Europe every year for the foundations of:

- Villas & houses
- Industrial buildings
- Bridge embankments
- Slope stabilisation
- Uplift protection
- Transmission towers
- Underpinning works

'DUCIS' are a proven, certified, fast, safe and economical alternative for many foundation tasks. If required we can assist with the design of grouted or non-grouted foundation solutions for even most demanding applications.
