

# SIDE GRIP VIBRATORS

The clever choice for many pile driving jobs

## DESCRIPTION

Side grip vibrators can grab the pile from the ground using the side clamp, rotate it to driving position and drive it until a depth where the excavator can reach the pile top and use the bottom clamp to drive the pile to final depth.

SGM series side grip pile drivers are modular, universal pile drivers for driving and extracting steel sheet piles, steel tubes and pipes of different dimensions as well as timber piles.

With its unique patented design the jaws can be changed on arms in a few minutes and drive the profile type of your choice.

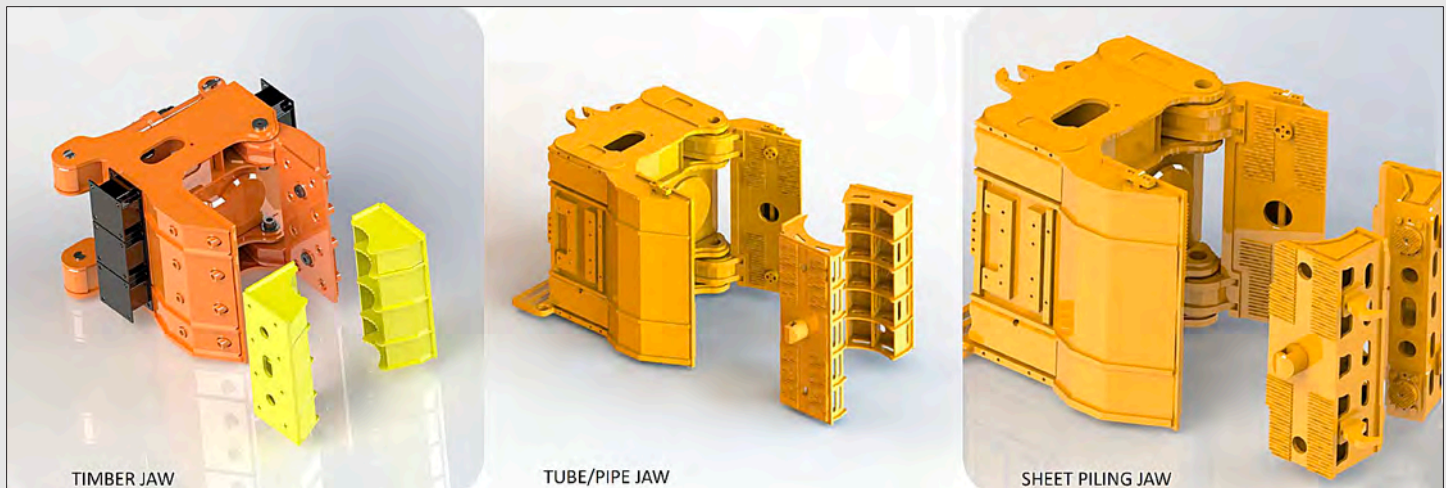

## ADVANTAGES

SMS is the developer and manufacturer of excavator-mounted piling and foundation equipment and a new generation of side grip technology. The vibratory pile drivers are simple, robust and utilise proprietary brand components.

Several features of our vibratory pile drivers are patented. One of the key features of our pile drivers is the forced lubrication of bearings and gears by two separate oil lines, resulting in longer life and the machine being able to run for long hours without overheating.
