

PILING 1/2021

WE OFFER A WIDE RANGE OF PILING EQUIPMENT FOR ALL POSSIBLE PILES, SOIL CONDITIONS AND PROJECT REQUIREMENTS

ADD-ON VIBRATOR

Hydraulic add-on vibrators or excavator attachments are the ideal tool to convert standard excavators into powerful piling machines for sheet piles, beams and pipes of shorter lengths.

FREE RIDING VIBRATOR

Crane-suspended hydraulic vibrators with power packs are the universal equipment for the installation of piles of any shape or size from small trench sheets to very large steel casings in different soil conditions.

IMPACT HAMMER

Diesel, air and hydraulic impact hammers are used in soil conditions which are not suitable for vibratory driving or when a very large driving energy is required for mega piles at marine and off-shore projects.

RIG WITH VIBRATOR

Our ABI Mobilram piling rigs use hydraulic vibrators attached to telescopic leaders and mounted to crawler carriers for driving and extracting sheet piles, beams and casings with unmatched performance and accuracy.

RIG WITH HAMMER

Hydraulic piling rigs with hydraulic or diesel impact hammers are mainly used for driving precast concrete piles but in some cases also for sheet piles, beams and pipe piles.

SHEET PILE PRESSING

Our hydraulic sheet pile press mounted to an ABI Mobilram is often the only solution in case of soft ground conditions and when no vibration at all is allowed due to nearby delicate structures or underground utilities.

PLEASE CHECK OUR WEBSITE FOR MORE DETAILS CONCERNING OUR ENGINEERING SERVICES AS WELL AS FOR OUR WIDE RANGE OF NEW AND USED MACHINES AND EQUIPMENT FOR INFRASTRUCTURE AND CIVIL ENGINEERING PROJECTS COVERING RETAINING STRUCTURES, PILING, DRILLING, FOUNDATION AND SOIL IMPROVEMENT WORKS.
